## POLICE

If heat stroke is suspected (excessive panting and drooling, listlessness or unconsciousness) prompt veterinary medical attention is vital. In the meantime, wet the fur immediately with lukewarm to cool water, not cold water. Bring the pet into the shade and offer drinking water.

Dogs have a limited ability to sweat; even a short time in a hot environment can be life-threatening. A dog's normal body temperature is about 39°C, a temperature of 41°C can be withstood only for a very short time before irreparable brain damage or even death can occur.

If you can't take your pet with you when you leave your car, leave them at home where they are safe.

It's imperative that each of us as animal owners is responsible in providing the proper care for our pets. As such, leaving a pet unattended in a vehicle is one of the most irresponsible things a pet owner can do.
